LaTeX-Moodle Quiz

1. **Old-skool MCQ**

   Time is finite and indexed by $t \in \{0, 1, ..., T\}$. Let the optimal value of a policy maker beginning with resources k_0 be given by: $V_0(k_0) = \max_{\{c_t, k_{t+1}\}_{t=0}^{T}} \sum_{t=0}^{T} \beta^t (c_t)^\alpha$ subject to the constraints: $k_{t+1} = \min\{k_t, 1\} - c_t$, $0 \leq c_t \leq \min\{k_t, 1\}$, and, $k_{T+1} \geq 0$, where $\alpha \in (0, 1)$; and $k = K/L$ and c, respectively, refer to per-worker capital stock and consumption. The state space $X \ni k_t$ is bounded.
   Describe precisely what we mean by a strategy in this setting.

   (a) A strategy is a date and state contingent plan $\{g_t(k_t)\}_{t=0}^{T}$ such that $c_t = g_t(k_t)$ at each date t and state k_t. ✓
   (b) A strategy is an optimal date and state contingent plan $\{g_t(k_t)\}_{t=0}^{T}$ such that $c_t = g_t(k_t)$ at each date t and state k_t.
   (c) A strategy is the optimal date and state contingent plan $\{g_t(k_t)\}_{t=0}^{T}$ such that $c_t = g_t(k_t)$ at each date t and state k_t.
   (d) A strategy is a policy selection $c_t = g_t(k_t)$ at each date t and state k_t.
